

Field Test Data

2012 U of Georgia – GMRE Center – Blairsville, GA

This plot was planted on 5/2/12; average plant population was 36,000 plants/ac. Traditional fertilizer program was applied. The difference was adding Monty's Program to the field. Monty's Program included Pre-plant application of 64 oz/a of Liquid Carbon + 32 oz/a of 8-16-8, broadcast with pre plant herbicides using 27 gal/a of water. A Post-application of 16 oz/a of Liquid Carbon + 16 oz/a of 2-15-15 with 27 gal/a of water.

The control plot yielded 254.67 bu/a and the Monty's plot yielded 280.51 bu/a, a difference of 25.85 bu/a. At the current price of corn of \$7.50 bu the Monty's Program provided a \$193.87 increase in revenue per acre. When you subtract the cost of the Monty's Program you still have a Net Gain of \$141.37 per acre advantage.

Ask how Monty's Liquid Carbon can make a difference.
