2012 Foliar Soybean Trial – Real Farm Research Facility – Aurora, NE

RFR

Foliar trial conducted at different growth stages for management and yield advantage

Real Farm Research located in Aurora, NE conducted the Soybean Trial this 2012 season. The plots consisted of 4 rows, 40 ft long x 30 inches wide and replicated 4 times. Trial was irrigated by gravity, was planted at 160,000 populations.

Monty's Plant Food Company conducts trials like this, of applying our products at different growth stages by **foliar application**, to help determine the greatest advantage of using our products and the best timing of application. In this year's trial the application at V3 provided a **9% yield advantage**. We are always seeking to provide real products to provide real answers for our customers.
