

Monty's Makes A Difference

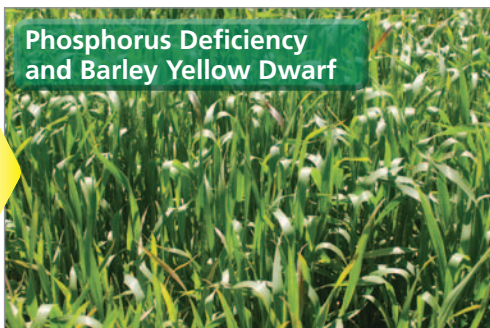

Monty's Carbon Makes A Difference on Wheat

Over the last three years, Liquid Carbon has been applied to the five acre field on Monty's Research Farm. The adjoining field never had any applications of Liquid Carbon. The difference carbon has made on the treated wheat field is night and day: darker green color, healthier plants, more tillering, less disease, less nutrient deficiency, advanced maturity, and most importantly: more wheat heads with the potential for more grain!

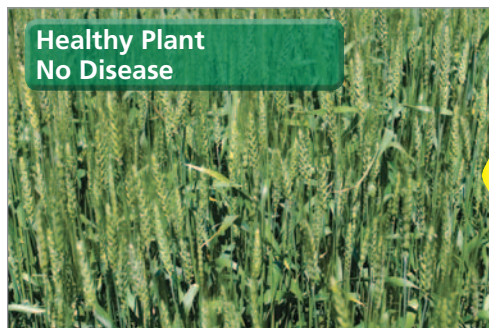

The right side had Monty's Liquid Carbon applied the last two years. Healthy soil leads to healthy plants, less disease, advanced growth development, and ultimately a higher yield.

Showing Deficiencies

Phosphorus Deficiency and Barley Yellow Dwarf

Healthy Plant No Disease

Healthy Full of Grain

Lower Yield Potential

Compaction Issues

Healthy Soil, more roots

Higher Yield Potential
