

Tobacco Bulletin

Farmers are facing a low supply of Sulfate of Potash this season. Monty's can help!

This spring tobacco farmers are facing a low supply of sulfate of potash. Monty's has the solution with its trio of products: Agrihance®-R, Sulfur 15™, and Microhance™. This combination of products provides sulfur, potash, and essential micronutrients designed to give your tobacco a strong, healthy start right out of the setter! This combination of nutrients can also help reduce transplant "shock." Jump start your tobacco crop this season with Monty's. For more information, talk to your local Monty's representative or dealer. Monty's... Success you can see!™

APPLICATION INSTRUCTIONS

Monty's recommends the following application at transplant:

- Use 1 gallon/acre Agrihance-R
- 1 to 2 quarts/acre Sulfur 15
- 1 to 2 quarts/acre of Microhance.

Note: Each product can also be foliar applied.

Don't forget to foliar apply Agrihance-V (Vegetative) at 2 quarts per acre any time and including lay-by for enhanced development and quality.

“ Monty's program is an ideal solution for farmers looking to give their tobacco plants a healthy start and ultimately increase their tobacco yield. ”

Joe Dedman, Vice President of Agronomy
