7.5% Chelated Copper (Cu)	

Derived from Copper Diammonium EDTA

PRODUCT DESCRIPTION

Monty's Copper is a fully chelated solution of copper EDTA and is recommended for the prevention and correction of copper deficiency in all crops. The preferred use is soil application to prevent the deficiency although it may also be used as a foliar spray for correction.

DIRECTIONS FOR USE

Monty's Copper may be applied in water, liquid fertilizers and suspensions, or with most pesticides. Application rates and dilution factors depend on crop sensitivity, the amount of foliage to be sprayed, and the application method. Monty's recommends first taking a soil test to determine micronutrient levels in your soils. Application guidelines for one growing season in the absence of a soil test is 1-2 pints mixed with a minimum of 15 gallons of water per acre.

WARNING: This micronutrient is intended only for the prevention and correction of copper deficiency. Overuse on the intended crop, or under conditions other than those recommended, may result in serious injury to the crop. Monty's recommends use only in accordance with the recommendations of a qualified CCA, agronomist, or dealer.
